Attachments: CAuse&disposal2012.xlsx

Hi Johnny,

This is a chart showing where each major POTW's biosolids went in 2012 (including land application of Class B and Class A, surface disposal, landfilling, transfer to a composter or other treatment facility, and amount in storage or long-term treatment. I'm just starting to get the data in for 2013 – it's due by February 19, 2014.

This chart shows to what county and to what applicator's fields in that county biosolids from the POTWs went, but doesn't break it down field by field – one would have to go back to the applicators' maps of their fields to see that. In Merced County, Synagro, Solid Solutions, and Brisco Enterprises all have sets of fields that are owned by one farmer and that are adjacent to each other. In Solano County, Synagro has fields owned by several different farmers in different locations.

In this database, it doesn't show where Class A biosolids were land applied, as most of the Class A biosolids is E.Q. compost or heat dried biosolids and the final destination of the compost and pellets may not be tracked. The main exception to this is the thermophilically digested Class A from the City of Los Angeles Hyperion WWTP, where almost all of the portion that is land applied goes to their fields in Kern County.

Subject: List of Biosolids Applicators sites
Importance: High

Hello Lauren, would you please send me the most current list of biosolids generators that apply biosolids to land and a list of the applicator sites and which entities land apply and which site. I know you sent this info last year, but I need the most current list.

Thanks,
Johnny g.
